Queries and bookings to admin@radstats.org.uk

The Radical Statistics Group was formed in 1975 as part of the radical science movement associated with the establishment of the British Society for Social Responsibility in Science (BSSRS). The researchers and statisticians who started Radstats shared a common concern about the political implications of their work and an awareness of the actual and potential misuse of statistics. Members of Radical Statistics believe that statistics can be used to support radical campaigns for progressive social change.
